OIL INDIA LIMITED — WELL COMPLETION REPORT: OIL-DEMO-018 (Page 1)

Field: Duliajan Basin • Spud: 2025-01-10 • TD: 3150 m • Status: Completed Development Well

1.0 Well Summary & Geological Succession

This report compiles operational, petrophysical, and casing evaluation records for well OIL-DEMO-018.

Formation	Top MD (m)	Bottom MD (m)	Lithology
Alluvium	0.0	450.0	Gravel & Sand
Dhekiajuli	450.0	1050.0	Sandstone
Girujan Clay	1050.0	1700.0	Claystone
Tipam Sandstone	1700.0	2400.0	Massive Sandstone
Formation-X	2810.0	3050.0	Interbedded Sand & Shale

OIL INDIA LIMITED — WELL COMPLETION REPORT: OIL-DEMO-018 (Page 2)

Field: Duliajan Basin • Spud: 2025-01-10 • TD: 3150 m • Status: Completed Development Well

1.0 Well Summary & Geological Succession

This report compiles operational, petrophysical, and casing evaluation records for well OIL-DEMO-018.

Formation	Top MD (m)	Bottom MD (m)	Lithology
Alluvium	0.0	450.0	Gravel & Sand
Dhekiajuli	450.0	1050.0	Sandstone
Girujan Clay	1050.0	1700.0	Claystone
Tipam Sandstone	1700.0	2400.0	Massive Sandstone
Formation-X	2810.0	3050.0	Interbedded Sand & Shale

SECTION 6.4: CRITICAL DRILLING EVENT LOG — FORMATION-X INTERVAL

DATE & TIME: 2025-04-12 14:30 hrs • **MEASURED DEPTH:** 2860.0 m MD (2818.5 m TVD)
FORMATION: Formation-X (Upper Arenaceous Member)
EVENT TYPE: Severe Lost Circulation / Partial Mud Loss (45 bbl/hr)

Detailed Narrative & Root Cause Analysis:

While drilling 8-1/2 in hole at 2860.0 m MD with 1.22 SG polymer WBM, penetration rate accelerated from 12.0 m/hr to 24.5 m/hr (drilling break). Immediately upon drilling 0.8 m into the sandstone streak, active pit volume began dropping at 45 bbl/hr. Total fluid lost prior to treatment was 95 bbl.

Root Cause: Penetration into sub-seismic open micro-fracture network with depleted reservoir pressure exhibiting an equivalent pore pressure of 1.08 SG.

Implemented Historical Mitigation:

1. Immediately picked up bit off bottom to 2845 m MD and shut down mud pumps.
2. Mixed and spotted a 30 bbl LCM pill comprising 25 ppb medium walnut shells + 15 ppb coarse calcium carbonate.
3. Allowed pill to soak across 2860 m interval for 90 minutes under static conditions.
4. Resumed circulation at throttled flow rate of 1950 LPM (reduced from 2250 LPM) with ECD maintained below 1.28 SG.
5. Full fluid returns established with zero further losses across interval.
